- [Free Genetic Testing Offered to 100000 Estonians](#) – Apr 2018 (Transitions Online)
 Unlike the other more than 120 biobanks across the world, the Estonian one aims to develop personalized medicine instead of focusing on genome research. The plan is for these DNA volunteers to then receive information through a family doctor on their genetic risk for specific diseases and advice on. Estonia will be the first nation to offer state-sponsored DNA interpretations to its citizens.
