

Servus TV - P.M. Wissen TV report on how treatments for COVID-19 are being developed

Wie entsteht ein Medikament gegen COVID-19?

In many countries, scientists are working with high pressure on a drug against the infectious disease COVID-19.

In Austria possible drugs against the virus causing COVID-19 are tested in the high-security laboratory at BBMRI.at partner Medical University of Graz. Up to 4000 compounds can be tested in the lab. This is done in collaboration with the startup company Innophore.
