"Data Quality for Biobanks"

The new standard for biobanks, ISO 20387 Biobanking – General Requirements for Biobanking, was released this year. How does it affect data quality? What role does data quality play within a quality management system?

In the context of the BBMRI-ERIC Quality Management webinar series, Johann Eder - data management expert in BBMRI.at - gave for the BBMRI-ERIC biobanking committee a presentation on data quality in the context of biobanking.

Johann Eder is full professor of Information and Communication Systems at the Alpen-Adria Universität Klagenfurt and leads within BBMRI.at the work package on data management.
