

BBMRI.at is part of the H2020 project DIGI-B-CUBE Ambassador Network

DIGI-B-CUBE project is an EU-funded Horizon 2020 Programme. B-CUBE is an abbreviation for Bioimaging, Biosensing and Biobanking:

- Bioimaging, or biological imaging, refers to when creating images of the human body or parts of it to diagnose or examine disease.
- Biosensing is the measurement of a chemical substance, for example glucose monitoring in diabetes patients or other medical health related targets
- Biobanking is the storing of human biological samples so that they can be used for medical research later.

DIGI-B-CUBE aims to unlock the cross-sectoral collaborative potential of SMEs by combining novel Digital Technologies with the Bioimaging-Biosensing-Biobanking industries. The project will support development and delivery of new market sensitive disruptive technologies and key digital innovations to reconfigure patient-centred diagnostics towards a Health Economy 4.0.

DIGI-B-CUBE develops international cooperation network consisting of ambassadors, one of which is BBMRI.at. <https://digibcube.eu/ambassadors-network/>
Ambassadors act as project nodes in different EU countries enabling the regional SMEs to benefit from the project schemes and services, and in turn supporting the DIGI-B-CUBE project in extending its outreach and impacts.
