

Special Edition in New Biotechnology on sample pre-analytics
with contribution from BBMRI.at

"Standardisation of generic Pre-analytical Procedures for In vitro Diagnostics for Personalised Medicine" is the title of a Special Edition in the scientific journal "New Biotechnology" – an outcome of the activities of SPIDIA4P.

Authors from BBMRI-ERIC and several national nodes contributed to this Edition; BBMRI.at partner Med Uni Graz contributed with two publications.

Contributions for this special edition were generated in the context of the H2020 EU project SPIDIA4P - Standardisation of generic Pre-analytical Procedures for In vitro DIAGnostics for Personalised Medicine (www.spidia.eu).

SPIDIA4P aims to develop & implement European pre-analytical CEN/Technical Specifications and ISO/International Standards. The special edition results from activities of the SPIDIA4P work package "Dissemination & Communication" lead by BBMRI.at partner Medical University of Graz. Objective is to raise awareness of the relevance of standardized, high-quality pre-analytical workflows in diagnostics, research and development as well as in biobanking that meets requirements of international standards.
