

'Research Infrastructures' - what are they? Watch the videos to learn more

BBMRI is one of these so-called European Life Sciences Research Infrastructures. A video explains what European Life science Research Infrastructures are and how they can support research.

Pioneering technologies are currently transforming research in the life sciences (<https://lifescience-ri.eu>): structural biology, chemical screening, advanced imaging or data analysis.

For this kind of multidisciplinary research access to high-end technologies and services is essential. But in most cases, it is not easily available for every scientist. For these reasons, European Life Science Research Infrastructures were established to grant this access and to successfully translate lab findings into future medical care.

BBMRI is one of these European Life Sciences Research Infrastructure. A video explains what European Life science Research Infrastructures are.
