

Ö1 radio report – 16. Feb 2022

Will the next COVID drug be produced in plants?

Interview on a novel approach with Kurt Zatloukal, BBMRI.at Director

Research on COVID drug from plants

Sars-CoV-2, the corona virus, that triggered the current pandemic, will remain. Practically all researchers are currently assuming this. Consequently also the disease COVID will remain and, therefore, medication will be needed to counteract it.

An international team of researchers from Med Uni Graz, University of Natural Resources and Life Sciences Vienna and a company from South Africa is pursuing an exciting approach to develop a COVID drug made from plants.
